PROFESSIONAL SUMMARY

Application Support Engineer with 3+ years of L1/L2 production support experience troubleshooting business-critical applications. Proven track record in Incident, Problem, and Change Management under strict SLA timelines. Skilled in SQL-based validation, Splunk log analysis, AWS/Azure cloud platforms, and script automation. Competent in working with cross-functional teams, executing minor configuration changes, and maintaining system availability using ITIL-aligned support processes.

CORE SKILLS

L1 & L2 Production Support • Incident, Problem & Change Management (ITIL) • SQL Querying & Data Validation • Root Cause Analysis (RCA) & Runbooks • Log Triage & API Debugging • SLA Triage & Ticket Escalation (ServiceNow/Jira) • Application Monitoring • ServiceNow Ticketing • Splunk • Dynatrace • Linux/Unix Administration • Bash & Shell Scripting • Python Automation • Cloud Operations • Production Support

PROFESSIONAL EXPERIENCE

Associate Infrastructure Consultant | Capgemini

- Provided L1/L2 application support for production systems, monitoring dashboards (Splunk/Dynatrace) to achieve high system availability.
- Diagnosed and resolved production incidents within SLA timelines using ServiceNow ticketing workflows.
- Wrote SQL validation queries and analyzed application logs to perform Root Cause Analysis (RCA).
- Coordinated with L3 engineering teams for code-level fixes and deployment support.
- Supported Azure cloud infrastructure and automation initiatives using Python scripting.

Academic Intern | Infinite Computer Solutions

- Assisted in application support, software testing, deployment validation, and troubleshooting.
- Investigated user-reported incidents and collaborated with stakeholders for resolution.
- Maintained documentation, support procedures, and operational runbooks.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript
Databases: MySQL, PostgreSQL, SQL Server
Cloud: Microsoft Azure, Amazon Web Services (AWS)
Tools: Git, Jira, ServiceNow, Splunk, Dynatrace, Postman, VS Code
Operating Systems: Linux/Unix, Windows
Scripting: Python, Bash, Shell Scripting

PROJECT HIGHLIGHTS

- Automated operational workflows using Python, reducing manual effort and improving support efficiency.
- Built and supported API-driven applications with monitoring and troubleshooting capabilities.
- Developed reporting and monitoring solutions for operational visibility and issue detection.

EDUCATION

Bachelor's Degree in Computer Science / Information Technology (or equivalent)
