CAREER OBJECTIVE

Seeking a challenging position as an Application Support Engineer in a dynamic organization where I can utilize my technical expertise, ITIL knowledge, and leadership abilities to ensure seamless application operations, improve service delivery, and contribute to the organization's strategic growth while achieving personal and professional development.

PROFILE SUMMARY

- Experienced IT professional with 6 years in application support, IT operations, and incident/problem management across critical business platforms.
- Proficient in L1/L2 support, providing 24/7 production support to ensure system reliability and availability.
- Experienced in Incident, Problem, Change, and Event Management, following ITIL processes to manage work order life cycles effectively.
- Skilled in writing complex SQL queries, utilizing Joins, functions, set operators, and subqueries to extract and analyze data efficiently.
- Strong expertise in Oracle databases, with extensive experience in both Windows and UNIX platforms. Proficient in UNIX commands including grep, sed, find, awk, more, less, head, and tail for effective Linux application management.
- Demonstrated leadership skills, capable of guiding teams and enhancing collaboration in high-pressure situations. Detail-oriented problem solver, committed to identifying and resolving production issues swiftly to minimize impact on operations.
- Strong communicator, able to convey technical concepts clearly to both technical and non technical stakeholders.

EDUCATION

B.A English Literature, 2011 – 2014
Deen college of arts and science
Mayiladuthurai.

TECHNICAL SKILLS

- Program Language: Oracle SQL, Unix, Shell Scripting
- Tools: Oracle SQL developer, AppDynamics, Autosys, ServiceNow, ORDER360
- ITIL: Incident management, Problem Management & Change Management
- Cloud: AWS

ROLES AND RESPONSIBILITIES

- Generated manual reports per user service requests from the database by writing SQL queries.
- Addressed user issues by providing relevant information and support as needed. Created and prioritized tickets based on issue details, impact, and urgency.
- Accessed data from various databases using SQL Developer for efficient data handling.
- Validated log files from User Interface and Server, connected via WinSCP, and accessed Load Balancer logs.
- Good understanding of SLA/KPI tracking, shift handling, escalations, and L2/L3 support operations.
- Provided accurate details and error messages to developers for root cause analysis.
- Documented and updated tickets with investigation details at closure.
- Accessed multiple servers using Putty configuration tool. Transferred files between Windows and UNIX systems using WinSCP.
- Managed incident, request, and change tickets using ServiceNow, including ticket closure.
- Set up alerts for critical issues and respond to system alerts as they arise.
- Perform routine health checks and system audits to ensure optimal system performance.
- Ensure adherence to SLAs by meeting performance targets for incident resolution and downtime minimization.
- Communicate effectively with stakeholders to provide timely updates on incident status and resolution.
- Monitor and optimize system performance, including application, database, and network optimization.
