Experience

ACADEMIC INTERN

Infinite Computer Solutions, Chennai, India

January 2026 | 6-Months

- Demonstrated ML concepts through 3 systems for text processing, image processing and age prediction.
- Built LLM-powered SSH Agent for automated remote script execution using natural language queries.
- Developed a Twitter-like platform with AI detection for text, image and combined AI content.
- Developing polyglot code intelligence system using knowledge graphs for multi-language code analysis.

Skills

Languages: Python, SQL, Java, C, C++, HTML, CSS

Frameworks & Libraries: PyTorch, Flask, Pandas, NumPy, SpaCy, NLTK, SQLite

Platforms: Visual Studio Code, Google Colab, Jupyter Notebook, Arduino IDE, Power BI, SQL Workbench

Tools & Tech: Git, Docker, Linux, Microsoft Office Suite, Cyber Security, Cryptography, Wireshark, IoT, Operating Systems, NotebookLM

AI Stack: LLMs, ML, Generative AI, Agentic AI, Prompt Engineering, NLP, Ollama, Whisper, LangGraph

Soft Skills: Communication, Research, Time management, Work ethic, Risk management

Education

St. Joseph's College of Engineering, Chennai, India

2022 - 2026

Bachelor of Technology in Artificial Intelligence and Machine Learning

CGPA: 7.72

St. Michael's Academy, Chennai, India

2014 - 2022

Formal, Middle and Higher Secondary Education

10th: 82% | 12th: 76%

Research Publications

AI-Based Meeting Summarizer Using Large Language Models

Author

International Conference on Visual Analytics and Data Visualization (ICVADV 2026)

- Published research on an AI system capable of processing audio/video meetings ranging from minutes to 4+ hours with automated transcription, summarization and action-item extraction.
- **Technologies:** Python, NLP, LLMs, Whisper, Ollama, Flask.

AI-Based Traffic Detection and Management System

Co-Author

Contemporary Computing Innovations Conference (CCIC 2026)

- Co-authored research on an AI-driven traffic system for real-time vehicle detection, violation analysis and congestion monitoring.
- **Technologies:** Computer Vision, YOLO, OCR, Edge AI.

Projects

Age Prediction Model using Deep Learning:

- Fine-tuned ResNet-34 model achieving 5.84 MAE facial age prediction.
- Built end-to-end PyTorch pipeline for preprocessing, training and evaluation.

AI Based Meeting Summarizer using LLMs:

- Developed LLM-based meeting summarization system for large audio recordings.
- Generated concise summaries and action items from lengthy transcripts.

SSH Agent:

- Built LLM-powered SSH Agent for automated natural language command execution.
- Integrated Python, SSH, Docker and LLMs for remote automation.

Code Intelligence System:

- Developed AI-powered code intelligence platform using LangGraph and Neo4j.
- Enabled polyglot dependency analysis through knowledge graph-based repository understanding.

Achievements

HackIndia 2025, St. Joseph's College of Engineering

- Led 4-member team presenting base-model training concept for AI tutoring applications.

Hack-AI-Thon, St. Joseph's College of Engineering

- Developed mental health analysis tool using text and speech-based sentiment prediction.

Linguaskill, Cambridge English

- Listening - C1, Reading - C1, Speaking - B2, Writing - B1. Overall Score - B2 (173)

Certificates

NPTEL: Data Mining, Python for Data Science, Introduction to Machine Learning, Edge Computing

Coursera: Machine Learning Specialization, Cloud Computing Basic

Languages

English (Proficient), Tamil (Basic), French (Basic), Hindi (Basic)
